CAMERATA MCR

UKRI Engineering and Physical Sciences Research Council

CADENZA

The Cadenza Project is a 5-year research project involving the Universities of Salford, Sheffield, Nottingham and Leeds. We are researching how hearing loss harms listening to music and working to improve it.

WHO ARE WE LOOKING FOR?

The research concert is designed for anyone who enjoys listening to classical music. No specialist listening or analytical skills are needed. We need an audience that has a mixture of people with and without hearing loss. If you would normally listen to music with hearing aids or a cochlear implant, please use them.
Your feedback will aid in improving music accessibility and contribute to scientific research.

WHAT IS A RESEARCH CONCERT?

The Camerata will begin by playing a symphony movement for you to enjoy. Afterward, the orchestra will perform excerpts in various styles to address issues faced by those with hearing loss during live classical music. You'll provide feedback via a questionnaire. The event concludes with another movement and an optional research task, followed by a Q&A session with experts from the Cadenza project on hearing loss and music.
